Abstract

This article outlines the main devices of word-formation that are productive in Gagauz. As is common in Turkic languages, Gagauz engages mainly compounding and suffixation to derive new words. Since Gagauz word-formation resembles Turkish word-formation very closely, emphasis is placed on those developments characteristic of Gagauz, most of them triggered by intensive contact with Slavic languages and with Romanian.

1. Introduction

Gagauz is a Turkic language with about 250,000 speakers, mainly in the Republic of Moldova and in Ukraine. The oldest written sources for Gagauz date back to the early 20th century and consist of folktales gathered by a Russian ethnographer. Before its official establishment by the Soviet government in 1957, Gagauz as a written language was used only by a handful of individuals. Even today, the majority of Gagauz speakers probably prefer to write in either Russian or Romanian, including those living in the autonomous region Gagauziya of the Republic of Moldova. Gagauz must be regarded as an endangered language (see Menz 2006 for general information on the Gagauz people and Menz 2003 on the status of the endangerment of the language).

Like Turkic languages in general, Gagauz is agglutinative and thus employs a large number of suffixes for derivational purposes. It belongs to the Oghuz branch of the Turkic languages, and is linguistically very close to Turkish. Due to its long and intensive contact with Slavic languages, however, Gagauz has developed features not found in Turkish. While these features are most obvious on the level of lexicon and syntax, changes on the morphological level, though minor in number, are highly significant for

research on language contact and on linguistic typology. Since Gagauz word-formation resembles Turkish word-formation very closely, I will put an emphasis on those features that are unique to Gagauz and/or have developed in a special way.

All linguistic examples are given in the new Latin orthography of Gagauz that was introduced in the Republic of Moldova in the year 2000.

In Turkic languages in general, suffixes undergo morphophonological changes according to the environment into which they are inserted. These changes are rule-bound and thus predictable. In the following sections, suffixes are given in standardized form; capital letters are used to indicate possible changes according to vowel and consonant harmony. In these standardized forms capital *A* represents the low vowels *a* or *e*, capital *I* the high vowels *i*, *ı*, *ü*, or *u*; *C* stands for *c* and *ç*, *K* for *k* or *θ*, *L* for *l* or *n*, and *D* for *d* or *t*. Brackets signal the possible loss of a consonant or vowel depending on the preceding vowel or consonant. By and large I have followed the system established in Johanson and Csató (1998: xv–xx).

Since Gagauz is a language with relatively few speakers, and research on it first began at the turn of the 20th century, few studies focusing on Gagauz word-formation exist. Word-formation is treated in the chapters on morphology in the grammar books of Pokrovskaja (1964) and Özkan (1996). Kolca (1973) deals with compounding in general, while Apostolova (2010) addresses the formation of botanical terms, most of them formed by compounding. The most relevant dictionaries for Gagauz are Baskakov (1973) and Čebotar' and Dron (2002).

2. General overview

The main processes of word-formation in Gagauz are compounding and suffixation. Like all other Turkic languages, Gagauz does not engage prefixes or infixes for derivation, though intensified adjective formation (see section 6) is sometimes (mis-)understood as prefixing. Reduplication plays a significant role in the formation of adverbs.

Conversion is not productive. There are, however, some cases of polysemous noun and verb stems like *acı* 'pain' and *acı-* 'to feel pain' or *don* 'frozen' and *don-* 'to freeze'. Backformation is not attested in Gagauz.

Some of the problematic areas regarding the distinction between syntax and morphology in Turkish have been discussed extensively. Since both languages are similar in this respect, the issues as well as the conclusions of the debate are just as relevant for Gagauz.

One field of debate concerns the establishment of distinctive word classes in Turkic languages in general and in Turkish in particular (for this discussion with respect to Turkish, see Johanson 1990: 187–191). Gagauz, like all other Turkic languages, has a morphologically distinct class of nominals and one of verbs. Any stem that can take the suffix for negation *-mA* is a verb. Within the class of nominals, however, there is no morphologically clear-cut distinction between noun and adjective. Almost any adjective can be used as the head of a noun phrase – but not *vice versa*, i.e. nouns cannot function as adjectives – without undergoing a derivational process, which is why various authors have regarded them as belonging to a single class of nominals. The border between the two classes is rather fluid, with some gradation (see Braun and Haig 2000), but adjectives nevertheless form a separate word class on the basis of syntactic and semantic features (Johanson 2006).

Another area of dispute is whether voice suffixes should be understood as derivational or inflectional elements (see section 4.3.2).

3. Composition

Composition, i.e. the formation of new words out of at least two stems, is very productive in Gagauz. Noun compounding is most productive.

3.1. Nominal compounds

There are two structurally different types of nominal compounds. The more productive type consists of two or more juxtaposed nominals with the head marked with a possessive suffix, i.e. N+N-POSS. The second, less productive compound type consists of two juxtaposed nominals, i.e. N+N.

Compounds of the first type are in most, but not all, cases endocentric: compare endocentric *domuz yaanı-sı* ‘pork; lit. pig meat-POSS3SG’ and *gün tut-ul-ma-sı* ‘solar eclipse; lit. sun grip-PASS-SUFF-POSS3SG’, with exocentric *gün batı-sı* ‘West; lit. sun sinking-POSS3’.

The simple juxtaposition of two nouns forms determinative compounds in which “[t]he referent of the head *is or consists of* the entity expressed by the modifier” (Johanson 2006: 67). This type is possible only with certain kinds of nouns, most often denoting a kind of material as in *yapaa çorap* ‘wool stocking’ ← *yapaa* ‘wool’ + *çorap* ‘stocking’, *demir kapı* ‘iron door’ ← *demir* ‘iron’ + *kapı* ‘door’.

One type of coordinative compound (dvandva) results from the combining of two related concepts to form a single, new concept, such as *ana-boba* ‘parents’ ← *ana* ‘mother’ + *boba* ‘father’, *soruş-cuvap* ‘pourparler’ ← *soruş* ‘question’ + *cuvap* ‘answer’. A second type of coordinative compound consists of nominals that are synonyms or semantically very close. The resulting compound refers to a concept that can be understood as the sum of the two parts: *çayır-çimen* ‘fields and meadows; lit. meadow-lawn’, *çayır-bayır* ‘green area; lit. meadow-hill’.

If the head of a compound is a lexicalized participle and the first element an argument of the head, no possessive is necessary either, e.g., *aaç kakan* ‘woodpecker’ ← *aaç* ‘wood’ + *kak-an* ‘pick-PART’, *Kervan-kıran* ‘(planet) Venus; lit. caravan breaker’ ← *kervan* ‘caravan’ + *kır-an* ‘break-PART’.

Most of the nominal compounds with the combination adjective + noun contain a colour adjective: *maavi çiçek* ‘blueweed; lit. blue flower’, *al beegir* ‘chestnut horse; lit. red horse’, *kara damar* ‘vein; lit. black artery’.

3.2. Adjectival compounds

A type of intensified adjective is constructed through the combination of two semantically related adjectives: *hurdullı-partallı* ‘completely ragged; lit. ragged-tattered’. Other

types of intensified adjectives can consist of a combination of an adjective with semantic content and a kind of (at least synchronically) meaningless echo-element, as in *ufak-tefek* ‘tiny; lit. small-*tefek*’ or the partial reduplication of the adjective with the replacement of the initial consonant by the labial *m*–: *çürük-mürük* ‘all decayed; lit. rotten-motten’ (see also section 5).

3.3. Verbal compounds

Verbal compounds are generally formed with a nominal element, either a noun or verbal noun/infinitive, followed by a light verb. In most cases, either *et-* or *yap-* ‘to do’ or *ol-* ‘to become, be’ function as the light verbs. The nominal element is generally a loanword of either Arabo-Persian, Slavic or Romanian origin. With Russian nominal elements there is a strong tendency to integrate infinitives by means of *et-* and nouns by adding *yap-*, as, e.g., *adaptirovat et-* ‘to adapt’ and *adaptirovat ol-* ‘to become, be adapted’ (< Rus. *adaptirovat*), *agressija yap-* ‘to exert aggression’ (< Rus. *agressija*). With Arabo-Persian loans the light verb *et-* is more common, e.g., *neet et-* ‘to intend’ (< Tur. *niyet* ‘intent’ < Arab. *nīya*), *seftā yap-* ‘to begin’ (< Arab. *siftāh* ‘beginning’). A distribution of *et-* and *yap-* comparable to that of Russian loans could not be observed.

Recent loanwords from Turkish are integrated by using the light verb *et-*, e.g., *önderlik et-* ‘to lead’ ← *önder-lik* ‘leadership’ < Tur. *önder* ‘leader’. The Turkish base *önder*, which is a non-transparent derivation from *ön* ‘forefront’, does not function in Gagauz; instead a derivation with the agent noun suffix *-CI* is used: *önderci* ‘leader’ (see section 4.1.1 for this suffix).

Some verbal compounds with an Arabo-Persian loanword as the nominal element are written in closed form: *azet-* ‘to like’ (< Arab. *ḥazz* ‘enjoyment’) and *metet-* ‘to praise’ (< Arab. *madḥ* ‘praise’).

Other light verbs that can appear in compounds without losing their semantics completely and are thus functionally much more restricted, are *çek-* ‘to pull’, *ver-* ‘to give’, *koy-* ‘to lay’, and *ur-* ‘to beat’, e.g., *soluk çek-* ‘to breathe’ ← *soluk* ‘breath’, *söz ver-* ‘to promise’ ← *söz* ‘word’, *amenda koy-* ‘to impose a fine’ ← *amenda* ‘fine’, *mitani ur-* ‘to bow’ ← *mitani* ‘obeisance’. *Koy-* in its function as a light verb is often a dialectal alternative for *yap-*. The light verb *çek-* ‘to pull’ is used in a variety of compounds that denote the execution of a physical punishment: *dayak çek-* ‘to beat up’ ← *dayak* ‘stick’, *kötek çek-* ‘to flog’ ← *kötek* ‘baton’, *lobut çek-* ‘to beat’ ← *lobut* ‘blow’, *solak çek-* ‘to strike a blow with the left hand’ ← *solak* ‘left hand’, as well as in compounds that designate the suffering of a calamity, such as *aaçlık çek-* ‘to famish’ ← *aaçlık* ‘starvation, famine’, *acı çek-* ‘to suffer from pain’ ← *acı* ‘pain’.

4. Derivation

Like Turkic languages in general, Gagauz has a broad inventory of derivational suffixes, both for nominal and verbal derivation. Suffixes are strictly divided into two groups: those that attach to nominal stems and those that attach to verbal stems. The distinction between noun and adjective is – morphologically speaking – not clear-cut, at least for

roots. Instead, there is a class consisting of words that tend to function syntactically as nouns, as opposed to others that function mainly as adjectives. Almost any adjective can in principle function as the head of a noun phrase and thus behave like a noun. I therefore treat in what follows nominals (adjectives and nouns) together, separately from verbs.

More than one derivational suffix can attach to a root; their order is variable as long as they form a meaningful combination. Changes in meaning and function occur with the changed suffix order. Compare the following examples that consist of exactly the same morphological material. The order of the attached derivational suffixes results in different semantic content and dictates the word class to which the resulting words belong: *adam-nik-siz* ‘cruel’ ← *adam-nik* ‘humanity’ ← *adam* ‘human being’ vs. *adam-siz-luk* ‘state of being deserted, loneliness’ ← *adam-siz* ‘deserted’ ← *adam* ‘human being’.

It is also possible to have the same derivational suffix twice in one word, though usually not directly following one another: *dooru-luk-suz-luk* ‘injustice’ ← *dooru-luk-suz* ‘unjust’ ← *dooru-luk* ‘truth’ ← *dooru* ‘accurate’.

In what follows, I will concentrate mainly on productive suffixes and mention non-productive ones only when necessary.

4.1. Nominal derivation

4.1.1. Denominal nominals

The denominal suffix *-CI* derives personal nouns, e.g., *işçi* ‘worker’ ← *iş* ‘work’, *yalancı* ‘liar’ ← *yalan* ‘lie’. In rare cases it also attaches to loanwords that already denote an occupation but are no longer transparent to the speakers of Gagauz. Thus a Persian loan like *başçıvan* ‘gardener’ – consisting of *başçe* ‘garden’ (< Pers. *bāgča*) and the Persian suffix *-van* – is no longer sufficient to denote the occupation in Gagauz, hence the suffix *-CI* is attached, resulting in the form *başçıvançı*. For further examples of the same phenomenon see Özkan (1996: 102).

The denominal suffix *-LIK* derives nouns from nominals with a variety of meanings. The suffix is attested already in Old Turkic with this variety of meanings, which Erdal (1991, Vol. 1: 121) summarizes as “hav[ing] the relational element of ‘purpose, designation’ in common, or, if one so prefers, the sememe ‘for’”. With its broad meaning the suffix has survived in virtually all Turkic languages. It can be used to form abstract nouns expressing the state denoted by the root, e.g., *ahmaklık* ‘stupidity’ ← *ahmak* ‘fool’, *körlük* ‘blindness’ ← *kör* ‘blind’, or a place for the object denoted by the base, e.g., *odun-nuk* ‘woodshed’ ← *odun* ‘wood’. It can also be used to form nominals denoting ‘objects or concepts intended for or suitable for X’, e.g., *abalık* ‘fabric suitable to make a cape’ ← *aba* ‘a kind of cape’. In some instances the attachment of *-LIK* to a root can result in the lexicalization or *ad hoc* formation of two semantically different nominals. We thus find, e.g., nouns like *hacılık* that has an abstract meaning ‘pilgrimage’ and a place-noun meaning ‘site of pilgrimage, holy site’. The suffix *-LIK* also follows other derivational suffixes, either nominal, e.g., *arıcı-lik* ‘apiculture’ from *arı-cı* ‘apiarist’, or adjectival, as in *bitkisiz-lik* ‘endlessness’ from *bitki-siz* ‘endless’ ← *bitki* ‘final’.

Gagauz has two denominal suffixes that express either the smallness of or endearment and pity for the person or object denoted by the stem. The diminutive suffix *-CIK*

attaches to nouns and adjectives, cf. denominal *oda-cık* ‘small room’ ← *oda* ‘room, chamber’. Nominals ending in *-k* lose their last consonant before the suffix, e.g., *yaprıcık* ‘little leaf’ ← *yaprak* ‘leaf’, *alça-cık* ‘low’ ← *alçak* ‘low’. Nominals ending in *-Ik* lose their final consonant before the suffix and take a variant with a low vowel in *-CAK*, e.g., *ericäk* ‘little plum’ ← *erik* ‘plum’ (see Pokrovskaja 1964: 104–105). In the case that the diminutive noun has a possessive suffix, endearment semantics come into effect, e.g., *bobacım* ‘my dear daddy; lit. father-SUFF-POSS1SG’ ← *boba* ‘father’. The suffix also serves to derive anatomic, botanic, and zoological terms, like *altuncık* ‘nasturtium’ ← *altın* ‘gold’, *bademcık* ‘tonsil’ ← *badem* ‘almond’, *kızılçık* ‘European cornel’ ← *kızıl* ‘red’, *surcık* ‘starling’ ← *sur* ‘cattle’, *bürüncük* ‘natural silk’ ← *bürüm* ‘bot. cyst’. A derivation from the pronoun *hepsi* ‘all’ is *hepsicii* ‘all-SUFF-POSS3SG’, with basically no semantic difference.

The second suffix is *-CAAz* (compare Turkish *-CAğIz*), which attaches to any noun, often without a change in meaning. The suffix is sometimes shortened to *-CAz*. Especially with objects, the added meaning is often quite blurred and there seem to be only pragmatic reasons for using it. The extensive use of diminutives is a special feature of all Balkan Turkic dialects.

The non-harmonic suffix *-(y)ka*, copied from Slavic, is used to derive female forms of personal nouns. It is the only non-stressable derivational suffix and the only bound marker borrowed into Gagauz. While it probably came into the language by way of borrowed lexemes like Rus. *nemka* ‘German woman’ and the like, it became productive in Gagauz, especially with denotations for professions, nationalities and geographic origin. With professions it often derives female forms from nouns derived with a denominal *-CI* or a deverbal *-(y)ICI*, e.g., *aşçı-yka* ‘female cook’ ← *aş-çı* ‘cook’ ← *aş* ‘food, dish’, *üüredici-yka* ‘female teacher’ ← *üüred-ici* ‘teacher’ ← *üüred-* ‘to teach’.

4.1.2. Deverbal nominals

The suffix *-mAk* derives action nouns from verbs. Any verb can be nominalized with *-mAk*, though some are lexicalized to a higher degree than others, e.g., *yaşamak* ‘life’ ← *yaşa-* ‘to live’, *düşünmāk* ‘thought’ ← *düşün-* ‘to think’. Other deverbal noun-forming suffixes include *-(y)Iş*, e.g., *bakış* ‘gaze’ ← *bak-* ‘to look’, *gidiş* ‘departure’ ← *git-* ‘to go away’, and *-mA*, e.g., *annatma* ‘story’ ← *annat-* ‘to tell’. Changes in syntax due to language contact have caused these derivations to no longer be used as predicates of non-finite clauses, as is the case in Turkish, but to function as simple nouns.

The suffix *-(y)ICI* forms agent nouns and nominals denoting occupations and habits from verbs: *güdücü* ‘herdsman’ ← *güt-* ‘to herd’, *verici* ‘generous’ ← *ver-* ‘to give’.

4.2. Adjectival derivation

4.2.1. Denominal adjectives

The suffix *-LI* attaches to nouns to form relational and qualitative adjectives, e.g., *küülü* ‘from the village, villager’ ← *küü* ‘villager’, *tuzlu* ‘salty’ ← *tuz* ‘salt’. In

Gagauz as well as in other Turkic languages influenced by Russian, there seems to be a growing tendency to use the suffix *-LI* to mark nominals that are actually adjectives or could function as attributes without derivation. One thus finds forms such as *altın-nı* ‘golden’ derived from *altın* ‘gold, golden’ or loanwords like *grotesk-li* ‘grotesque’ (< Rom. *grotesc* from Italian *grottesco*).

The suffix *-ki* derives adjectives from nouns and adverbs denoting time or location, e.g., *büün-kü* ‘today’s’ ← *büün* ‘today’, *içerki* ‘indoor’ ← *içer* ‘room’.

The privative suffix *-sız* attaches to nouns mainly to form adjectives that denote the absence of the entity denoted by the base, e.g., *ses-sız* ‘soundless, silent’ ← *ses* ‘sound’, *uyku-suz* ‘sleepless’ ← *uyku* ‘sleep’, *acızsız* ‘merciless’ ← *acırgan* ‘mercy’.

4.2.2. Deadjectival adjectives

The suffix *-(A/I)çık* attaches to adjectives that express intensity in several dimensions. Words ending in *-k* lose their last consonant before the suffix. The choice of the vowel attached after stems ending in consonants other than *-k* is not phonologically predictable in terms of lowness or highness, thus *az-ıçık* ‘very little’ ← *az* ‘little’, but *dar-açık* ‘very narrow’ ← *dar* ‘narrow’. The suffix intensifies the degree of the original meaning: *ufacık* ‘tiny’ ← *ufak* ‘small’, *incecik* ‘very slim’ ← *ince* ‘slim’.

The stressed suffix *-CA* (for the unstressed *-CA* see section 4.4) derives adjectives from adjectives, either roots or derived ones, that tone down the semantic content of the base: *kısa-ca* ‘shortish’ ← *kısa* ‘short’, *tuz-lu-ca* ‘somewhat salty’ ← *tuz-lu* ‘salty’ ← *tuz* ‘salt’.

4.2.3. Deverbal adjectives

The suffix *-(I)lI* forms adjectives with resultative semantics from transitive verbs, e.g., *kurulu* ‘built’ ← *kur-* ‘to build’. In Turkish, *-(I)lI* can, as Erdal (2000: 28) has demonstrated, “be added only to monosyllabic stems or to stems whose second syllable consists of a vowel, and only to simple, neither deverbal or denominal bases”. This restriction to non-derived stems is not, or perhaps more precisely, no longer valid in Gagauz, where the suffix derives adjectives from transitive verbs of any length and also from derived ones, e.g., *yapış-tır-ılı* ‘fixed; lit. adhere-CAUS-SUFF’ or *terbi-ed-ili* ‘trained; lit. education-do-SUFF’. Like in Turkish, the derived adjectives in Gagauz refer to an “attained state” (Erdal 2000: 28–29), hence their resultative semantics. Since the use of participles has significantly declined in contemporary Gagauz in general and the perfect participle in *-mİş* is no longer used attributively, a semantic opposition between adjectives in *-(I)lI* and perfect participles of passives stems in *-mİş*, as is the case in Turkish (Erdal 2000: 28), does not exist.

Adjectives derived by *-(I)lI* function either as attribute or as copula complement and are particularly frequent in predicative function, e.g., *anni-sın-da yaz-ılı* ‘It is written on her forehead; lit. forehead-POSS3SG-LOC write-SUFF’. The function of these adjectives in Gagauz very much resembles those of Russian past passive participles.

4.3. Verbal derivation

4.3.1. Denominal verbs

The only productive denominal verbal suffix in modern Gagauz is the suffix *-LA*. It mostly attaches to genuine Gagauz nominals to form transitive verbs with the meaning ‘to do, make X’, e.g., *hazırla-* ‘to prepare’ ← *hazır* ‘ready, available’ and *varakla-* ‘to gild, gold-plate’ ← *varak* ‘gold leaf’. The formation of intransitive verbs is, if only much rarer, also possible with this suffix, e.g., *köstekle-* ‘to stumble’ ← *köstek* ‘hobble’. In some rather rare cases it also derives verbs from loanwords of Russian origin, like *vaksala-* ‘to polish’ (< Rus. *vaksa* ‘shoe polish’). The denominal derivation of verbs from Russian loanwords, however, is significantly more rare than compounding with Russian nouns or infinitives (see section 3.2) and is used mainly in written form.

4.3.2. Deverbal verbs

Apart from some non-productive elements, Gagauz derives 1. reflexive/passive verbs using *-(I)n* and *-(I)l*, as in *tutun-* ‘to hold on’ and *tutul-* ‘to be held’ ← *tut-* ‘to hold’; 2. causative verbs using *-DIr*, *-t*, and *-(I)r*, as in *düzdür-* ‘to make someone repair’ ← *düz-* ‘to repair’; and 3. reciprocal verbs using *-(I)ş*, as in *atış-* ‘to throw at one another, quarrel’ ← *at-* ‘to throw’. As mentioned in section 2, some researchers regard these suffixes not as derivational but inflectional. Arguments in favor of inflection include the fact that no change in word class takes place and that almost any verb can be expanded by these voice suffixes. On the other hand, more than one suffix of this category can be applied to a root. Forms like *az-dır-ıl-* ‘to be made angry’ ← *az-dır* ‘to cause an inflammation, make angry’ ← *az-* ‘to become inflamed’, *tutuştur-* ‘to set fire to’ ← *tutuş-* ‘to ignite’ ← *tut-* ‘to hold’ are actually quite numerous. These examples also demonstrate that the semantic content of the derived verb is not always a straightforward causative, passive or reciprocal of the base verb. Moreover, this suffix category is the one closest to the root. Verbs derived by reflexive/passive, causative or reciprocal suffixes can be further derived by deverbal nominal derivation, e.g., *yapılmak* ‘pretense’ ← *yapıl-* ‘to pretend’ ← *yap-* ‘to do’.

4.4. Adverbial derivation

The unstressable suffix *-CA* and its expanded version *-CAsInA* derive adverbs from nominals: *enikunu-ca* ‘carefully’ ← *enikunu* ‘careful’, *üfke-li-cä* ‘angrily’ ← *üfke-li* ‘angry’ ← *üfke* ‘anger’, *ad-in-ca* ‘by name’ ← *ad* ‘name’, *adam-casına* ‘humanly, decently’ ← *adam* ‘human’.

The diminutive suffix in *-CIK/-CAK* (see section 4.1.1) also derives adverbs from adjectives and adverbs, as in *çabucak* ‘quickly’ ← *çabuk* ‘quick’, *kısacık* ‘shortly’ ← *kısa* ‘short’, *şindicik* ‘just now’ ← *şindi* ‘now’.

The ablative suffix *-DAN* is “borrowed into the derivational system” (cf. article 14 on the delimitation of derivation and inflection) to derive temporal and locational adverbs

from nominals, e.g., *arka-dan* ‘from behind’ ← *arka* ‘backside’, *hep-tän* ‘completely’ ← *hep* ‘always’, *an-sız-dan* ‘unexpectedly, all of the sudden’ ← *an-sız* ‘unexpected’ ← *an* ‘moment’.

Similarly, the dative case *-(y)A* in combination with a third person singular possessive suffix serves to derive adverbials from nouns or adjectives: *aykırı-lı-in-a* ‘diagonally; lit. diagonal-POSS3SG-DAT’ ← *aykırı-lık* ‘diagonal, cross beam’ ← *aykırı* ‘crosswise’, and *hakına* ‘actually; lit. verity-POSS3SG-DAT’ ← *hak* ‘verity’, *dik-in-ä* ‘vertically; lit. vertical-POSS3SG-DAT’ ← *dik* ‘vertical’.

5. Reduplication

Intensive adjectives are formed by a partial reduplication of the initial syllable of an adjective stem. The first consonant is substituted most frequently by a *p*, and less often an *s* or *m*: *ap-ak* ‘bright white’ ← *ak* ‘white’, *kos-koca* ‘huge’ ← *koca* ‘big’, *düm-düz* ‘completely flat’ ← *düz* ‘flat, even’.

Total reduplication of nouns forms distributive adverbials, as in *adım-adım* ‘gradually’ ← *adım* ‘step’, *buka-buka* ‘bit by bit’ ← *buka* ‘bite, mouthful’, *alayı-alayı* ‘in groups, here and there’ ← *alayı* ‘group’.

The total reduplication of adjectives or adverbs serves to derive intensified adverbs *üüsek-üüsek* ‘very highly’ ← *üüsek* ‘high’ and *may-may* ‘very nearly’ ← *may* ‘nearly, almost’.

Abstract

This article does not provide an exhaustive survey of Karaim word-formation as the common Turkic word-formation devices are presented in other articles of this volume. It will focus on the productive suffixes and copied, non-Turkic, features. The language studied is the Lithuanian variety of the Turkic language Karaim. Karaim employs typical Turkic strategies of composition and a relatively large number of derivational suffixes. Under the influence of the dominant Slavic-Baltic languages, it has also adopted some non-Turkic strategies in its word-formation.
